Hi Linda, I talked with HDR and the statistical evaluation will be made between background well W-2A and the January detection monitoring results from all wells. Timing is dependent on receipt of lab results, expected mid- to late-February. Evaluation will include comparison of water chemistry between colluvial well W-5 and new well W-5B screened in weathered bedrock and whether it is appropriate to compare W-2A background to the colluvial wells.

I'll request today that the annual report be posted to our CCR website; it typically takes them about a week to get it posted, so you can expect to see it by the 15th. Early April is generally good for next call, if you'd like to send us potential dates/times. Could you include potential times the week of April 12th as well? I may be on PTO the first week in April, but I will make the call regardless. Thanks.

Hi Linda, you're very welcome; I thought it was a good discussion. We do plan to complete the statistical evaluation in Q1; I'm not sure what the time period will be, but I can find out if that would be helpful. We typically post our documents to the web near the end of the 30-day period, which would be a month or so before our next call, but I could see about posting it early if that would help. I'll check with HDR generally about the early April timeframe for next call, then we can look at calendars for potential dates and times.

Jennifer,

Thank you again for your time and the time of your contractors and Xcel staff during our call on Tuesday. I have just a couple of questions. When will you be posting to your website the annual groundwater report for 2020? I believe you stated that it was now part of the operating record. Will this latest report include a statistical analysis of the groundwater data; and, if so, for what timeframe?

We would like to schedule a call with you in early April, if you think your contractor will have been able to receive and evaluate the groundwater monitoring results for the newest set of

wells by then.

Thank you.

Linda Jacobson
